CDC Austenson 2-Row Feed Barley

Description:

CDC Austenson is a 2-row hulled feed barley with top grain yield and short, strong straw.

CDC Austenson produces grain yields higher than Xena along with high test weight and large, plump kernels. CDC Austenson is well-adapted across western Canada, and compared to Xena, has shown improved resistance to prevalent races of net form net blotch, spot form net blotch and spot blotch. This variety is particularly well-suited to producers seeking a top-yielding 2-row feed barley with improved performance over Xena.

Strengths:

- Higher grain yield than Xena
- Large, plump kernels with high test weight (87% plump kernels)
- Stronger straw than Xena
- 2 cm shorter in height than Xena
- Improved leaf disease resistance compared to Xena
- Resistant to stem rust
- Resistant to covered and false loose smut

Neutral Traits:

- Medium maturity, similar to Xena
- Test weight similar to Xena

Weakness:

- Susceptible to scald and true loose smut (similar to Xena)

Breeder:

Dr. Brian Rosnagel
Crop Development Centre
University of Saskatchewan
Saskatoon, SK
